Acknowledgments	viii
Notation	xi
1 Introduction	1
1.1 Who Should Read This Book?	8
1.2 Historical Trends in Deep Learning	11
I Applied Math and Machine Learning Basics	29
2 Linear Algebra	31
2.1 Scalars, Vectors, Matrices and Tensors	31
2.2 Multiplying Matrices and Vectors	34
2.3 Identity and Inverse Matrices	36
2.4 Linear Dependence and Span	37
2.5 Norms	39
2.6 Special Kinds of Matrices and Vectors	40
2.7 Eigendecomposition	42
2.8 Singular Value Decomposition	44
2.9 The Moore-Penrose Pseudoinverse	45
2.10 The Trace Operator	46
2.11 The Determinant	47
2.12 Example: Principal Components Analysis	48
3 Probability and Information Theory	53
3.1 Why Probability?	54
